Type of Backflow Preventer at this address: _____

Model: _____ Date Last Tested: _____

Helpful definitions:

Backflow: The undesirable reverse flow of used water, contaminants or pollutants into the public drinking water supply as a result of a cross-connection.

Cross-connection: any actual or potential connection between the public drinking water supply and a source of contamination or pollution.

Backflow Preventer: A device or process that prevents impurities or contaminants from being drawn into the public drinking water supply.

Backflow prevention assemblies must be installed by a licensed plumber.

Testing and repairing of backflow prevention assemblies must be preformed by a tester registered with the Iowa Department of Public Health yearly.
